

Lagniappe Semester: Duality of Abelian Groups

Memo 1 regarding assignments

For the moment the assignments include work on exercises recorded in the notes. We have exercises E1.1, E1.2, E2.2 (this requires a bit of topology). The following concern free abelian groups, yet to be discussed. E2.3, E2.4, E2.5 (one half of this is easy, one half hard. The easy part is the one we shall use).

If solutions reach me via e-mail in \TeX -source file format, I will incorporate them into the course notes.

If you find some topics of discussion in class that are not in the notes but which you would like to see in the notes, let me know.

Karl Hofmann, May 18, 2006
